

InRail and Interporto Centro Ingrosso di Pordenone: a new route to Europe

The assignment of the Pordenone Intermodal Terminal to InRail – the railway company of the Autobrennero Group – marks the beginning of a new phase of revitalization for this logistics hub. The agreement launches a path of **strategic growth**: thanks to its solid presence in the region and its international experience in France, Austria, Germany, Slovenia, and Croatia, InRail is the ideal partner to develop rail freight services toward Europe's main markets.

Sustainability and competitiveness

Rail transport is a strategic ally for companies focused on export and advanced logistics.

Each train replaces the equivalent of 25 trucks on the road, resulting in:

- reduced CO₂e emissions
- less road traffic and lower environmental impact
- greater operational efficiency
- more competitive logistics costs
- direct and fast access to European markets.

InRail: a partner driving regional growth

InRail is a reliable, market-oriented partner capable of:

- developing new dedicated rail services
- creating tailor-made logistics solutions
- collaborating with institutions and local operators
- strengthening Pordenone's role as a leading intermodal hub North-Eastern Italy.

New network of connections

With an average of 150 trains per week, InRail can integrate the Pordenone Terminal with the TEN-T networks (Mediterranean and Scandinavian-Mediterranean Corridors), expanding the network of connections with:

- **strategic Italian ports:** particularly Trieste, Monfalcone, Genoa, Livorno, Ravenna, Valdarò
- **Central and Eastern European markets:** particularly Austria, Germany, Slovenia, Croatia, Serbia, Hungary, Poland.

An interport undergoing expansion

The Pordenone Terminal is undergoing significant infrastructure upgrades; the new works, which make it possible to handle more trains while reducing time and costs, include:

- extension of the shunting neck
- construction of new tracks to increase capacity
- expansion of operational areas
- new services for more efficient operations.
